**●● mmcité**

# WE VALUE OUR CITIES AND SO WE CONSTANTLY ENDEAVOUR TO MAKE THEM BEAUTIFUL WHEREVER THEY MAY BE.

## **CITY**

Public realms are fascinating places where people meet each other and experience the history of a city. At mmcité, we consider it a privilege to design for these urban areas. For us, making street furniture is a cultural mission. We can completely change the face of a city by installing just a few small elements.

## **ACTIVITY**

mmcité is not only a supplier of high-quality street furniture, our company is also a partner to all those who want to create something special within public spaces. Mayors of cities of all sizes, in the mountains or coastal areas, architects of small teams and large design institutions, construction companies of local or transnational importance – we address all of them with the aim of achieving the perfect project.

## **DESIGN**

It starts with a design idea, and then we begin sketching. Our team of experienced professionals is dedicated to creating interesting and top-quality products. Efficient functionality, careful processing, and affordable costs are the main parameters we monitor throughout the process. Modern design and distinctive expression are constant standards of mmcité.

## **QUALITY**

We use only the very best materials, and subject them to rigorous testing. We take advantage of two sources: on the one hand, our long-term experience; on the other, our commitment to innovation. Only the best of the best is chosen. Functionality, durability and cost are the most important criteria for us.

# MORSE

Design  
Studio Segers

Message for the future - Morse code flawlessly communicates with its long signals & short stops. It translates the languages of interior airport corridors and railway stations, and outdoor languages of parks and waterfronts. Inspired by the rhythm of its surroundings, the Morse collection seamlessly blends into any environment, adapting to its surroundings with modular flexibility. Available in a variety of materials and accompanied by a comprehensive range of accessories, the Morse collection caters to diverse needs and preferences. From integrated tables and lights to backrests, armrests, and USB charging ports, the Morse collection offers complete functionality and comfort.

# CONICS

Design  
Herrmann&Coufal

We are always looking for new shapes to diversify the public space, and we are also expanding the uses of our site furnishings. The conical concrete body has become the cornerstone of our new Conics range. The conical castings in three sizes transform into multiple functions: table, seat, planter, or bench. Circular shapes are increasingly popular in outdoor furniture not only for their aesthetics but also precisely because of their greater variability and capacity.

# PLATFORM

Design

David Karásek, Michael Tomalík

Platform offers joyful, unexpected moments. It transforms traditional parking areas and brownfields into vibrant terraces for bars, cafes, chillout zones, and green spaces. Platform is a modular component that can also be adapted to any urban setting using a variety of our products. A complementary product is the hanging planter, which replicates the size of the individual platform parts. The modular system is produced in two depths and two widths, allowing for a variety of configurations to suit the needs of the surroundings. The platform offers cushioned safety bumpers. The galvanized bumper system promotes a sense of safety. This allows visitors to relax and fully enjoy the vibrant public space.

# LAGO

Design  
David Karásek, Michael Tomalík

An unmissable circle with an eccentric eye, or an open lagoon as an urban harbor? Playful circular forms and radial lines define the geometry of seating that surprises with practicality and compositional versatility in equal measures. You can sit freely both indoors and out. This energy is also expressed by the unconventionally positioned curved backrests. The set consists of three sizes of seats in enclosed and open model and can be supplemented with separate round seats with a single leg, which can also serve as a table for the higher model. Lago is an excellent base for varied compositions of circular structures, which never fails to entertain.

P-anlæg

Cipro CFR

Cipro CFR

# ORBIT

Design

David Karásek, Václav Kocián

The round seats orbit the round table like planets, but they can also unite in an oval. Everyone can enjoy their food outside, close enough together, but also far apart. The straightforward design of the table brings a clear and fresh expression, but it will not get lost in space. The secure and stable seating unit has adjustable feet and can be anchored or free standing. It can be in a park, in a square or a pedestrian zone, and in places such as a campus, a company courtyard, etc.

# REFORMA

Design  
Vrtiška & Žák

They usually blend into the landscape – boring benches with concrete bases and plain wooden boards. Here is an attempt at a modern interpretation of this overlooked element. The simplicity and directness remains, adding refinement of form and subtlety of detail. The result is an original and entirely contemporary design, but one that is archetypally familiar to all. There are two versions of the bench: one with backrest and without backrest, both can be assembled in long rows or in an arch or circle or installed on a wall.

# MANTA

Design  
Lucie Koldová

Manta is the ideal piece of street furniture that responds to the needs of modern life and represents a fresh solution for the combination of work and rest. The rounded curves copy the movement of imaginary waves embodying the flow of water, but the shape also provides sufficient comfort for reading a book or enjoying coffee. The transition from one horizontal plane to another creates multifunctional surfaces, which form a complex minimalist object fulfilling the role of a table, bench, or worktop. The inspiration for the shape and name of Manta came from the elegant movement of the stingray. The design stands out in all types of public space, both indoors and outdoors. It will enliven a large open space, an entrance hall, or a wide corridor, as well as a garden, a small park, a plaza between buildings or an atrium. With Manta, you can create a private oasis of rest almost anywhere – it provides space for concentration and relaxation.

# STACK

Design

David Karásek, Lucia Lehrer

Durable enough for use in public spaces, but subtle enough to be an alternative to traditional furniture. This is the Stack range, which consists of a stackable short sofa and a comfortable armchair, practical chairs and tables, all with wooden slats, high-pressure laminate or steel rounds. For better comfort, a set of waterproof padded seats in interesting color combinations is available as an accessory. The timeless design combines modern and retro influences. Stack can serve as an unanchored outdoor relaxation element complementing classic urban furniture or as elements for terraces, hotel, school, or corporate premises, both indoors and outdoors. The benches are complemented by water-resistant upholstered seat cushions in a variety of interesting color combinations and feature sophisticated handles.

# RAUTSTER

Design  
Herrmann&Coufal

Light, lively, thoughtfully crafted, a picnic set like this will find its place anywhere people need to relax outdoors. The bespoke side frames add character to the joint between the table and the seat, which is available in a variety of materials. Traditional, durable wooden boards, an indestructible perforated steel sheet, or a thin panel of HPL are all materials which can fulfill the demands of outdoor diners perfectly. The range is also highly versatile – the two-bench model has space for four to six people, while the one-bench model offers a smaller footprint for seating with a view where space is at a premium. The picnic table can also be complemented with a chessboard engraved into the wooden boards. Rautster also considers wheelchair users, as an adjustment to the side frame has created space to park a wheelchair at the side. Sharing space has never been so easy.

# BOHÉM

Design  
Aleš Boem, MEYTO

The universal outdoor collection Bohém does not hide its inspiration from the past – it is a modern interpretation of classic school chairs, familiar to millions of students. It will captivate with its shape and offer fresh solutions for public spaces, as well as outdoor café terraces and restaurants. A durable, distinctive outdoor chair, with a touch of retro style, but at the same time completely contemporary and fully stackable. The set also includes a table with a round or square top.

RUSH AM3!  
WU TANG

Wake UP

MOTHER EARTH PROJECT

KEEP

16

# PIXEL

Design

David Karásek, Herrmann&Coufal

The popular Pixel range, which is built on a playful mosaic of square modules, folded into almost any shape, is complemented by a minimalist table. Symmetrical, regular, and completely irregular sets are what enliven public space in a new way, and the outdoor steel tables are a great addition to this creativity. Pixel tables can be supplied with integrated USB charging.

**BIGSEE  
PRODUCT DESIGN  
AWARD 2019

# CONSTRUQTA

Design  
David Karásek

The shape of this unmissable bench found inspiration in one of the fundamental construction elements – the truss beam. It takes the most natural engineering beauty and transforms it into landscape architecture in a cultivated form. The regular play of clearly defined inclines and rectangular surfaces connected by radii is what gives character to this otherwise simple prism made of noble HPC concrete. The small integrated legs on the underside lift the entire mass slightly above the surface, which further increases the elegance of the installed element and eliminates any unevenness of the surface. A bench of more than eight feet can be placed separately, in pairs or triples or can be arranged in long lines.

H

# SATELLITE

Design  
Eduard Herrmann

It's as if a plate has fallen straight from the sky and fingers of a cosmic architect pierced it into the surface. That's how unearthly the unique shape of this bench feels. Although it is evident that it is made of heavy concrete, it appears almost intangible. The elegant concave shape is not only for decoration but also for function. It brings privacy to people who wish to separate themselves from the outside world. Noise and wind stand no chance. It can completely transform a variety of locations, whether it is a park, square or waterfront. It stands out in open spaces as well as in small, enclosed corners and pocket parks.

# RIVAGE

Design

David Karásek, Radek Hegmon

Rivage opened an entirely new category of products – loungers for public spaces. The simple solid frame with a distinctive and elegant profile supports boards and slats made of solid wood. The version with steel rounds looks light and timeless; in combination with playful colors, it will make the public space an unmistakable oasis. It is an appropriate addition to park benches and seating elements for places where people relax. Parks, public gardens, waterfronts, rest areas of school premises, hotel terraces – all these places can now be enriched with Rivage loungers, whether firmly anchored to the ground or free standing for easy relocation. An interesting and practical accessory is a durable all-steel table for putting down a drink, laptop, or book, and in contrasting colors, it also presents a funky accent. The version with built-in USB charging further expands the variability and possibilities of using the lounger. Rivage, the world's favorite public space lounger, is now available in a new two-person lounger and lounge chair. These new additions to the Rivage family offer even more ways to relax and enjoy public spaces with loved ones or friends.

# URBAN ISLANDS

Design  
Lucie Koldová, Dan Yeffet

A large island to sit on; a place to lay a laptop; or a supportive backrest. The unique shape, based on the simple geometry of several capsule elements and three levels of horizontal surfaces, offers a new perspective on seating elements in public space. The modules can stand alone or be connected in a playful archipelago. The intersection of shapes, different orientations of wooden boards, and different colors of the body, completes the overall effect. Wood on horizontal surfaces can be replaced by high-pressure laminate (HPL), whose smooth texture, colors and possible bespoke graphic designs add a new character. The possibility of combinations is so broad that it will satisfy any creative designer who desires something new and unusual for their project.

# LANDSCAPE COMPACT

Design  
David Karásek, Viktor Šašinka

The system of seating elements, following the popular Landscape range, attracts attention and collects prestigious design awards. A distinctive side silhouette with a gap between the seat and the backrest determines the basic shape. The individual modules of the range can be combined almost indefinitely to create assemblies of different lengths with curved and straight sections. The range works very well also as individual park benches and seats of standard sizes. As a novelty, armrests can also be added anywhere across the length of the seat.

# MIELA

Design

David Karásek, Radek Hegmon

The design has achieved its goal. This charismatic bench benefits from the modelled morphology of its cast aluminum sides, which is enhanced by the softly machined top backrest. The sophisticated silhouette of the park bench hovering over the pavement and the high-quality craftsmanship will create a corresponding contemporary counterweight in the most valuable historical sites, as well as humanizing a modern complex full of uncompromising architecture.

# PORTIQOA

Design

David Karásek, Radek Hegmon

The softly modelled legs of the Portiqoa park bench, made of cast aluminum, work with an impressive optical effect of diagonally built sides. The bench only touches the ground with a narrow bottom edge, and from some angles, some incredibly thin lines are revealed. The uninterrupted run of wooden slats bends downwards under the seat, which significantly strengthens the entire structure. The independently shaped armrest can be added for more comfortable sitting and getting up.

mpc.it.com

# PORT

Design  
David Karásek

Walls and stairs of various kinds belong to the common elements of public space. They are often used as suitable seats. The Port range of wall-mounted outdoor benches, based on the successful Portiqoa range, is designed for such situations. The modular system includes a solution with or without a backrest, which can be combined almost without restriction. The cast aluminum sides are elegant, having softly shaped detail, and thanks to the steel anchoring, this bench seemingly levitates slightly above the wall.

# PREVA URBANA

Design

David Karásek, Radek Hegmon

In addition to style, this bench has excellent ergonomics which makes it surprisingly comfortable. A belt of subtle wooden slats perched on an optically light construction made of a steel strip characterizes this traditional park bench. It is based on the aesthetics of classic garden furniture and brings a garden atmosphere and comfort to public spaces. The version with steel rounds shows an interesting change in appearance and expands the variability of use. The extended version of the popular Preva Urbana bench offers more seating and a backlight elegantly placed in the front wooden slat.

# VERA

Design

David Karásek, Radek Hegmon

The economical park bench, available in a wide range of variants, shows that advanced modern design does not always mean a high price. Durability and strength are combined with the purity of shape and remarkable visual lightness. The simply shaped table and park chairs allow you to create original sets in both public and private spaces.

# VERA SOLO

Design

David Karásek, Radek Hegmon

A variable system based on the Vera series of park benches, consisting of straight and curved modules, allows the creation of long and interestingly shaped units. The legs are positioned along the bench axis, simplifying the silhouette, and facilitating access from both sides. This also makes cleaning under the bench easier. Individual seats can also be mounted on a wall, expanding the series' possibilities. An interesting and functional addition to the series are the backrests and armrests, which enhance the functionality and aesthetics of the Vera Solo design. Subtle proportions, timeless design, and high variability predestine the Vera Solo range for use in the widest spectrum of projects.

# INTERVERA

Design

David Karásek, Radek Hegmon

A series of optically light benches perched on a pair of legs in the longitudinal axis. The subtle yet sufficiently durable construction carries a seat and backrest made of wooden boards or steel or stainless steel rounds. The bench can stand alone or be connected in an endless line of elegant seating elements. The limited number of legs brings not only elegance but also more convenient installation and maintenance of the area under the bench.

# EMAU

Design

David Karásek, Viktor Šašinka

This totally contemporary park bench is inspired by a connection with the past. The carefully designed, slimline side profile draws inspiration from the brutalist architecture of the 1960s, which is reflected in the support elements thanks to cutting-edge modelling development. A continuous arrangement of wooden slats joins the seat and backrest in a single elegant piece – a modern silhouette, with precise, old-school details. An alternate model with steel rounds in place of the wooden slats completely transforms the mood of the city bench, playing with an eye-catching, transparent effect. This outdoor park seating range is available in the original bench size or as a single seat chair and can be fitted with armrests.

# EMAU SOLO

Design  
David Karásek, Viktor Šašinka

A city bench arisen from the Emau range, directly drawing inspiration from the architecture of the 1960s. It stands on just two legs, creating an unusual, slimline character. Advantages of this concept include easy anchoring on hills, as well as a clean visual space underneath the bench. It also enables modifications for a raised seat for the elderly, who are further helped by a graspable armrest. Emau Solo also offers models with wooden slats and a steel grill. There is also a backless model in the range.

**BIGSEE  
PRODUCTDESIGN  
AWARD 2019  
WINNER**

# BLOCCQ

Design  
David Karásek

A massive block placed on sharp points – such contrast soundly affects the public space. The resulting effect is emphasized by generous proportions, amplified especially in long strips composed of several modules. The range includes monumentally simple variants without a backrest as well as a practical and comfortable version with a backrest, which can also be placed in the opposite direction. The range is complemented by a single-seat version. The specialty is the two-tone powder coating of steel bases, offered in six color combinations. Benches with a backrest can be equipped with durable all-steel tables for putting down a drink, laptop, or book, and in contrasting colors, they also present a funky accent. The version with built-in USB charging is a handy option for everyone who wants to stay outside longer. In the evening, the decorative LED lighting, which is available on all Blocq models, also stands out.

# EBLOCQ

Design  
David Karásek

Six lockable boxes integrated into the park bench follow from the successful Blocq range. eBlocq is not unsightly storage; rather, it is a seating element with extended functions. It represents the concept of smart cities in its creative form and in a great design. It will come in handy for those who use electric bicycles for their everyday errands in the city, while for others it will serve as an extraordinary bench. In schools, sports or hotel complexes, or restaurants near bicycle paths, eBlocq can become part of the infrastructure supporting e-mobility.

# RADIUM

Design

David Karásek, Radek Hegmon

The unique design of this series of street furniture benefits from the aesthetics of bent sheet steel. The thoughtful intersection of the walls achieves high strength of the structure and overall excellent durability. Extended versions bring more slim elegance, in all material variants. The basic all-steel version with perforation best captures the character of the Radium design. When combined with the unique Citépin (plastic plugs), it can help mitigate the feel of cold metal. The wooden slats on the seat are a proven and beautiful classic; the high-pressure laminate (HPL) scores points with its elegant smoothness available in monochrome colors or with the possibility of applying various graphic designs and patterns. Backed benches can be equipped with durable all-steel tables for putting down a drink, laptop, or book, and in contrasting colors, they also present a funky accent. The version with built-in USB charging is a handy teammate for everyone who wants to stay outside longer. In the evening, the decorative LED lighting also stands out. Radium thinks of even the smallest ones, so the children's version with a lowered seat is in the range too.

# LIMPIDO

Design  
Roman Vrliška

The delicate yet durable structure of steel rounds creates the refined contours of the unconventional Limpido outdoor bench. The collection includes a bench with or without a backrest, both in a long version or as a single seat. In the office building, shopping center, park, or any public space, the almost supernatural transparent effect of this design range stands out.

# SINUS

Design  
Roman Vrliška

The extension of the original concept of Sinus tree grates has resulted in the creation of several separate outdoor benches with an unmistakable expression. The strong steel sheet, simply bent in a finely trapezoidal profile, is reinforced with an almost invisible rib, rendering a completely solid shape, even for the most extended bench. The perforation refers to the pure aesthetics of the sixties, and when combined with the unique Citépin (plastic plugs), it can help mitigate the feel of cold metal. A small yet important detail is the possibility of the bench to optically grow directly out of the tiles.

# WOODY

Design

David Karásek, Radek Hegmon

The outdoor bench, inspired by the aesthetics of stored lumber, consists of a massive sandwich of wooden boards firmly tightened with six stainless steel rods. The large block rests on optically subtle steel legs as if it were floating above the paving in all its massiveness. The bench is very low maintenance; the hardwood has no surface treatment and ages naturally and beautifully. The Woody park bench is supplied in modules that can be arranged in a variety of linear or closed sets. Some variants add other functions such as bicycle racks or tree protection. The USB charging option can become a handy accessory for everyone who wants to stay outside longer. An exciting and practical accessory is a durable all-steel table for placing a drink, laptop or book; and in contrasting colors, it also presents a funky accent. In the evening, the decorative LED light stands out. The lighting feature is available on all models. Woody thinks of even the smallest ones, so the children's version with a lowered seat is in the range too.

# BISTROT

Design

David Karásek, Radek Hegmon

An unconventional concept of a seating element for a public space. Ideal for a quick meeting, a small snack or sending an email. The raised seating is truly comfortable, even when you are in a suit. Thanks to its compact dimensions, the Bistrot is suitable even for tiny spaces. In combination with the table, interesting sets can be created for al fresco dining. The range is made of durable steel construction with seats or tabletop made of outdoor high-pressure laminate (HPL) available in monochrome colors or with the possibility of applying various graphic designs and patterns. Colors have no limits.

# TABLY

Design

David Karásek, Radek Hegmon

The modular range of tables combines two types of side supports: cylindrical or square, centrally located, leg – and two types of wooden profiles. The tabletop made of steel rounds is available as well. The range thus makes it possible to create a picnic set consisting of the Tably table with most benches from the mmcité catalog. The centrally located legs facilitate access to the seats; wooden boards or steel rounds create a practical tabletop. The Tably range also includes small tables with a laser engraved checkerboard motif on the wooden slats.

**LITTER RECEPTACLE  
ASHTRAYS**

**BETTER** 138 [362] . **CRYSTAL** 164 [363] . **MAXIMINIUM** 149 [364] . **MINIUM** 142 [364] . **MULTIMINIUM** 148 [367] . **NANUK** 150 [368]  
**PRAX** 160 [370] . **QUINBIN** 154 [372] . **RADIUM** 166 [375] . **SWISSBIN** 141 [375] . **TLESK** 140 [376] . **VALET** 167 [377]

# BETTER

Design  
David Karásek

A heavy, large-volume concrete litter receptacle that does not look monstrous. Thanks to thoughtful shaping, it has a body of organically modelled but strong lines. The distinctive upper edge leads to the recessed inner liner; the lower indistinct legs increase stability, allow water to drain and facilitate installation on uneven surfaces. With its elegant shape, this litter receptacle fits into almost any context – it will elevate an otherwise neglected location, and support quality space with its fine details and overall design.

# TLESK

Design  
David Karásek

The lightweight litter receptacle shows the power of transparency. It's not just a pretty object – the model with a transparent plastic bag allows you to detect suspicious content. Its refined shape makes this humble bin an exciting piece and a worthy addition to all kinds of public spaces. The model with a transparent plastic bag is open from the side for very fast emptying and fitting of a new bag (using a flexible band), while the model with a plastic inner liner is emptied conventionally upwards.

# SWISSBIN

Design  
David Karásek

Holes like those in Swiss cheese, with a basic conical shape. It looks like a creative joke, but it is fully functional. The large-volume litter receptacle with small drop-in areas has excellent stability thanks to the weight at the base. The convex lockable lid underlines the overall closed and compact shape, which perfectly places this bin on large squares, busy promenades, traffic junctions and quiet parks. The effect can be enhanced by a bold body color.

# MINIUM

Design  
David Karásek

The smooth, finely grooved surface of the softly modelled body of the almond shaped litter receptacle brings refined aesthetics to this category of products. High-quality materials and elaborate details predetermine this waste bin for use not only in outdoor public spaces but also in all types of public interiors. The outdoor litter receptacle is offered in several options –with anchoring under the ground, purposefully shaped legs for surface mounting, an extended version with a concrete plinth or a post-mounted alternative.

# MULTIMINIUM

Design  
David Karásek

Expansion of the Minium design family with an increasingly popular version for sorted waste. The slim proportions and elegant cover make this practical public litter receptacle a beautiful piece. Thanks to the advanced form, quality design and refined details, the recycling bin can be successfully used both indoors and outdoors. The labels marking sorted waste have undergone a minor change and are now vertically positioned for better visibility.

# MAXIMINIUM

Design  
David Karásek

Another extension of the Minium design family, this time with a large-volume litter receptacle with a volume of 120l. The steel structure is covered with aluminum profiles or wooden slats. Characteristically shaped top cover protects the bin from the rain. The litter receptacle is designed to be surface mounted.

# NANUK

Design

David Karásek, Radek Hegmon

Formally subtle, structurally simple, materially diverse – an example of clever design, which brings one of the broadest series of outdoor litter receptacles with a fresh, attractive appearance. Cylinder and block, two primary bodies located on the central leg with several types of covering for truly universal use. Cylinder with pleasant wooden slats, the block also with a reinforced bent metal sheet, transparent stretched metal sheet or smooth high-pressure laminate (HPL). Square versions can also be fitted with an elegant cover.

# QUINBIN

Design

David Karásek, Viktor Šašinka

Quinbin is a range of durable litter receptacles that use various materials for their outer covering to change their appearance. Two body shapes are available: the first is a clean, slim cylindrical shape; the second a more sophisticated form, building from a rounded square base. With exterior options for a robust model with perforated steel sheets, an opposing aesthetic featuring wooden slats, or a precise aluminum model with subtle, irregular fluting, there is a full spectrum of possibilities for any kind of public space. The lightweight but durable plastic liner also makes moving and emptying the bin straightforward. All shape and material options can be fitted with a detachable top cover, as can the variant with three separate vessels for separating waste.

zmieszane

plastik

papier

# PRAX

Design

David Karásek, Radek Hegmon

The steel frame of this litter receptacle paints a modern, yet almost classic contour with a gently arched roof. Simple wooden doors complete the character of this outdoor litter receptacle. It is intended for use in any urban or park environments. The model with perforated sheet steel doors represents a more industrial character. In contrast, the HPL doors shift the appearance almost to the interior furniture style and offer the possibility of applying various graphic designs and patterns. The large model with a volume of 31 gallons or a model for dog waste with integrated space for special bags completes this trendy range of litter receptacle.

**KINGS  
CROSS**

# CRYSTAL

Design

David Karásek, Radek Hegmon

A fully enclosed all-steel litter receptacle with a slim geometric shape and a stable solid construction resembles a rather elegant column in space. The triple litter receptacle for recycling is an increasingly popular option. Optional steel drop-in areas keep unpleasant smells locked inside. The current problem of most of today's cities is solved with the Crystal model for dog waste with integrated space for special bags. A matching large volume ash receptacle is also available for smokers.

# RADIUM

Design

David Karásek, Radek Hegmon

The geometrically shaped body with softly rounded edges is based on a bent metal sheet. The carrying ring of the Radium outdoor litter receptacle hides the inserted box for the inner liner. The unit is an example of an elegant litter receptacle for public spaces with high durability, whose design is linked to the Radium benches.

# VALET

Design

David Karásek, Radek Hegmon

Ash receptacles have become a modern element of street furniture, which is why we designed Valet. The slim, discreet outdoor ash receptacle, based on the Lot bollard design family, is a typical stand-alone ash receptacle suitable for various spaces. One of the models has been redesigned to serve as a bag dispenser next to dog waste bins. Its advantages include, in addition to appearance, quality of materials and easy operation.

# **BOLLARDS GUARDRAILS**

**CYDLIMIT** <sup>179</sup> (380) . **DONAT** <sup>170</sup> (381) . **ELIAS** <sup>172</sup> (383) . **ISAC** <sup>175</sup> (384) . **LOT** <sup>176</sup> (384) . **LOTLIMIT** <sup>178</sup> (385) . **MIELON** <sup>174</sup> (386)

# DONAT

Design

David Karásek, Radek Hegmon

A simple yet attractive cylindrical bollard with a T-shaped cover made of cast aluminum. Elegantly slim DON1xx series with a diameter of 76 mm and robust DON2xx with a diameter of 114 mm. A great feature is the possibility to place lighting under the upper surface of the T-shaped cover using low-voltage LEDs. This offers the opportunity of installing illuminated and non-illuminated models in one row.

# ELIAS

Design

David Karásek, Radek Hegmon

A slim, geometrically shaped bollard hiding a longitudinal cavity that changes its appearance depending on the angle of view, from dark shadow to full transparency. This simple block with an extreme channel with contemporary and classic characteristics can be used in any environment. Upon request, an embossed municipal emblem can be embedded into the body of the bollard. What is dark during the day, lights up at night – the interior of the bollard can be fitted with low-voltage LED light and serve as a decorative lamp with the same design as the other Elias bollards.

# MIELON

Design

David Karásek, Radek Hegmon

A cast aluminum bollard of fine anatomy. The slender proportions and softly sculpted shapes of the Miela bench series offer a two-tier design. The effect is perfectly highlighted by installing multiple bollards in one row.

# ISAC

Design  
Tomáš Rusín, Ivan Wahla

A delicate, slightly conically shaped bollard, made of cast aluminum, can't deny its inspiration from classical architecture. With its traditional design, it fits into historic outdoor spaces, as well as conventional urban areas and spaces. Upon request, an embossed municipal emblem can be embedded into the lower part of the bollard.

# LOT

Design

David Karásek, Radek Hegmon

This smart bollard utilizes a simple L-profile in a unique way, finished with a simple top. Two cross-sectional sizes allow you to choose the right proportion for a variety of spaces. The optical impression and silhouette varies according to the angle of view. Galvanized steel structure treated with powder coating.

# LOTLIMIT

Design

David Karásek, Radek Hegmon

The clean shape of this outdoor guardrail is based on a combination of L-profiles, which follows the Lot bollard with its design. It offers new possibilities to organize public space. Optically lightweight model with one horizontal rail, multi-element variants which prevent anyone from passing under, or models with a stainless-steel cable – all these options allow you to choose the most suitable solution for a given space. The lowered version of this guardrail serves as suitable protection for lawns.

# CYDLIMIT

Design

David Karásek, Radek Hegmon

A series of compact city guardrails with arched posts. A lightweight model with one horizontal rail and another version with a lower horizontal rail or with stainless steel cables are available.

# **BIKE AND SCOOTER RACKS**

**BIKEBLOCQ** 188 [390] . **BIKEPARK** 191 [390] . **EDGETYRE** 192 [391] . **ELK** 186 [392] . **GOMEZ** 184 [392] . **LOTLIMIT** 189 [392] . **TROT** 182 [394] . **VELO** 190 [397]

# TROT

Design

David Karásek, Iveta Krmičková

The scooter is a joy of today's life, and the Trot is a port between the roads. Made of recycled material that can be inserted between our bicycle stands, mounted on the wall, or used as a stand-alone element. The collection responds to the need to keep places with scooters organized. It responds exactly according to the needs of the handlebars.

# GOMEZ

Design

David Karásek, Jitka Trčková

A bicycle rack with a minimalist circular form and a unique side profile. It is composed of a pair of materials: a galvanized steel frame on the inside, with an external coating of durable rubber. The ring is seated in a subtle cast aluminum bracket. The stand is strong enough to support your bicycle but soft enough not to damage it. A simple circle with no superfluous decorations works perfectly in any architectural context, in all possible situations, whether it is installed individually, in small groups, or in long rows for a subtle interplay of circular forms.

PŘIČINOU KANCELÁŘOVNA V  
LA MĚSTSKOU ČÁSTI

# ELK

Design

David Karásek, Herrmann&Coufal

We designed a bike rack and ended up with a sculpture. The endless line of the basic form is enriched by angular corners, creating a highly functional bike rack with aesthetic qualities that are hard to find elsewhere on the market. The unique concept of the stand for three bikes allows you to create interesting parking stations. Elk's clean design and gentle lines make it easy to incorporate it into all kinds of architectural projects, contemporary or historical.

# BIKEBLOCQ

Design  
David Karásek

A simple frame finished with a horizontal wooden element perfectly supports the bicycle, which can be parked on both sides. The bike rack is tilted at the same angle as the feet of the Blocq bench, so it fits perfectly alongside the rest of the range. It works just as well as a standalone installation as it does next to other pieces of street furniture, always looking and working great.

# LOTLIMIT

Design

David Karásek, Radek Hegmon

The modest bicycle rack, based on the Lotlimit railing family, works with the most basic morphology, a combination of L-profiles, which makes it easy to incorporate into any project. It communicates very well with both contemporary and historical architecture.

# VELO

Design

David Karásek, Radek Hegmon

Velo is a very practical, durable bicycle rack of advanced modern design, which fully fulfills its function. Thanks to its robust yet elegant shape, it is well received even in a high-end environment. Velo bicycle racks are available in single-sided and double-sided versions.

# BIKEPARK

Design

Péter Kukorelli & Balázs Orlai

Playing on the design of the letter P, Bikepark is a highly functional solution to the dilemma of where to leave your bike. It is part of the whole system originally installed in car parking spaces on the streets. It looks great as a stand-alone piece as well as installed in groups.

# EDGETYRE

Design

David Karásek, Radek Hegmon

A simple bicycle rack with strict geometry and a clear goal of quality infrastructure for cyclists. Suitable for use in shelters or outside and available in several shapes. The upper horizontal element hides a belt of durable rubber, which protects the bicycle paint from scratches.

**TREE GRATES AND GUARDS  
PLANTERS  
DRINKING FOUNTAINS  
DISPENSERS**

**ARBOTTURA** 204 (400) . **FLORIUM** 212 (402) . **FONS** 216 (403) . **HYDRO** 215 (403)  
**KVĚTA** 210 (404) . **MALAGENO** 208 (405) . **POLYS** 200 (406) . **SANIT** 214 (408) . **SINUS** 206 (408) . **TYPO** 196 (410)

# TYP0

Design

David Karásek, Michael Tomalík

One of the world's first mass-produced planters made with 3D concrete printing technology, designed primarily for public spaces. The Typo collection features eight shapes that, when viewed from a certain angle, give the impression of balancing on their bottom edge. Planters can also be equipped with an irrigation system. Plants can improve the climate of public spaces, even where there is little natural rainfall. Typo follows the ubiquitous typography in public space, and its quality affects the overall feel of the places we move through on a daily basis.

# POLYS

Design

David Karásek, Michael Tomalík

Thanks to its variability, the Polys plant pot system offers a wide range of applications in both exterior and interior. Different heights and diameters of flowerpots grow out of a steel platform creating a micro landscape full of living flora. The individual parts of the set work independently or together, resulting in a collection offering a myriad of sizes and shapes. Polys can be placed on the street, in a shopping mall, at school, in the office, on a terrace, or at home. It is a fresh solution for separating and making a selected space more comfortable.

# ARBOTTURA

Design

David Karásek, Radek Hegmon

The traditional element of the city environment in a contemporary design, this is the tree grate Arbottura. Suitable for various locations, both historical and completely modern. There are circular and square versions that can be combined to achieve the optimal solution. The standard version of this protective tree grate is designed for pedestrian traffic only; the reinforced models allow for cars and small vans up to 3.5t. For creative minds, some of the steel ribs can be painted with color. This unique concept opens the possibility of creating interesting graphic lines that can be linked to paving patterns.

# SINUS

Design  
Roman Vrtiška

The unique concept of combining a tree grate with seating elements is, in the true sense of the word, multifunctional. Sinus gives ample protection to the trees and extra useful space on the street to the people. The fresh and elegant shape was expanded upon, with the addition of matching Sinus benches. The perforation is a nod to the pure aesthetics of the sixties. When combined with the unique Citépin (plastic plugs) on the seats, it eliminates the disadvantage of cold metal, providing excellent seating comfort.

# MALAGENO

Design  
David Karásek

Outdoor planters with a self-irrigation system. The aluminum sheet panels, always bent over the corner, are asymmetrically divided, which gives the product an unmistakable character. Thanks to its simple shape, it is possible to place the flowerpot practically anywhere, whether it is large squares, where the monumental square model looks best, or the aisles of shopping centers with a more subtle rectangular version.

# KVĚTA

Design  
David Karásek

A large outdoor planter for a generous dose of greenery, great for city boulevards and busy streets. Ideal for anywhere it is challenging to get greenery into the pavement. Balanced proportions and covering made of wooden slats with small bevel on vertical edges are desirable details. Alternatively available with a self-irrigation system.

# FLORIUM

Design

David Karásek, Radek Hegmon

Outdoor planters are an integral part of urban areas. The traditional square or circle shape of this elegant outdoor planter offers universal use with its clean design.

# SANIT

Design

David Karásek, Michael Tomalík

The design of the disinfectant dispenser responds to market developments in recent years and the new needs of people in public spaces. It's simple and non-intrusive design blends in with any environment. Sanit is ideal for places with high traffic, such as public buildings, schools, libraries, offices, concert halls, and sports venues. It features a non-contact sensor for dispensing sanitizer, ensuring a hygienic and hands-free experience.

# HYDRO

Design  
Petr Hruša

Stainless steel drinking fountains are a must-have in any well-equipped park or square. The fountain has a nozzle at the top of a pronounced cone, from which the water flows into a square drainage field around the fountain.

# FONS

Design

David Karásek, Viktor Šašinka

Urban refreshment without unnecessary waste. We are water, and water is life. The Fons drinking fountain caters to both humans and their furry friends in parks, squares, and even office buildings. Its touchless design with dual nozzles provides instant refreshment for you and easy bottle filling. Say goodbye to bottled water! An integrated bowl collects water from the lower nozzle, allowing your pet to enjoy a refreshing drink without needing to bend down.

# **INFORMATION PANELS**

# CLIG

Design  
David Karásek, Viktor Šašinka

Fully equipped modern information panel of the standard format in a combination of galvanized steel, stainless steel and aluminum, brings the unmistakable effect of illuminated information to the urban environment. We respond to the changing requirements of advertising in cities, and our advertising panels are extensively technically innovated, with improved operating characteristics and increased reliability.

# POSTERION

Design

David Karásek, Iveta Krmíčková

The Posterion information panel is a modern solution to the classic element of street furniture for urban and rural locations. Simple morphology with a functional roof provides everything you need.

# EGERO

Design  
David Karásek

The classic information panel has its place in most municipalities and cities. In the new design, the cylindrical body is supported by an irregular structure of steel plates, which creates enjoyable dynamic moment in a significantly static element. There is also a version with the lighting of the active area through energy-saving LED reflectors placed on an elegant ring.

# OS

Design

David Karásek, Radek Hegmon

The arrow orientation system of Os applies the principle of thin direction arrows pointing to destinations that are visible from all sides. Simple and effective shaping combined with well-arranged graphic elaboration of individual arrows represents an advanced system for guidance in all types of public space.

# CUBY

Design

David Karásek, Viktor Šašinka

The cubic structure is transferred into a space for diverse use in any type of public environment. A durable and robust frame is the foundation for its almost limitless adaptation to various public spaces. The enclosed cell surrounded by wood isolates you from the surroundings, the louvered wall transforms with one move from privacy to transparency, and greenery is not only overwritten into the surroundings but also into the side walls. Cuby is a gazebo designed for your meetings, relaxation, dreaming, studying, or picnics in the fresh air. It has several additional features, such as LED lighting, USB charging, or integrated photovoltaic panels. It can stand alone, also interconnected into multiple sets, anchored under paving or on the surface. Cuby is a robust response to the demand for greater intimacy in public spaces. We continue our search for answers to the question of greater intimacy in public space. The screen, which follows the Cuby series of gazebos, separates the individual assemblies and offers more intimate spaces in parks, courtyards, or squares. It comes in two heights, with integrated greenery and different types of plants to complete the product.

# NUBO

Design

David Karásek, Viktor Šašinka

A modern shelter for a more attractive appearance of cities. Glass surfaces, steel structure, and rounded corners give an elegant impression. The milky roof offers a smooth minimalist surface and ideal shading from the sun, another variant can be a delicate graphic continuing onto the shelter's walls. Structurally, it meets the requirements for areas with higher snow and wind loads. The two-sided version offers shelter to passengers traveling in different directions. It includes an integrated bench, which can be color-coordinated with the given elements of the steel structure to create a perfect contrast. Optionally, we can supplement it with a photovoltaic off-grid system or USB ports designed for charging our devices.

KLADNÍ ŠKOLA

Alexanderplatz

ICA MIAMI

# UFO

Design

David Karásek, Michael Tomalík

A versatile element for public spaces, UFO shelter lands gracefully over various types of urban furnishings, providing an alternative to standard umbrellas with a central leg. The stable steel structure eliminates problems related to inclement weather and/or vandalism. It can be installed in parks, along walking paths, and semi-public areas in almost any setting without the need for daily maintenance. Complemented by a floating circular platform, UFO provides a space for peaceful and undisturbed rest.

# DEPOT

Design

David Karásek, Michael Tomalík

A universal car shelter is becoming a new segment in our portfolio. Precise lines meet the strictest dimensional, technical, and construction requirements. The covered parking space also offers integrated electric charging option. Side walls can be customized with wooden slats, providing a customizable touch, and may include a dedicated cabinet for electrical installations. Additionally, we offer the option to install a photovoltaic system on the roof.

# GEOMERE

Design  
Radek Hegmon

A range of shelters with optimized functional elements. The simple, secure and efficient modular system is based on the new columns in the rear wall. This enables us to have suitable assemblies without side walls, which is practical in narrow or confined spaces. The integrated, elegant bench with wooden boards is a pleasant detail that enhances the whole shelter. Graphic designs applied on the glass panels in the roof and the walls add to the aesthetic quality of the shelter. There is also the possibility of placing solar panels on the roof or using a green roof.

# AUREO

Design

David Karásek, Radek Hegmon

A range of glass roof shelters and several material options that make it easy to choose the best option for each location. The minimalist and highly variable design of the Aureo series offers maximum comfort and fusion with the surroundings, as is expected from bus shelters. The flat glass roof covers the construction of a clean unit with many interesting details. The support system in the rear wall allows the use of a variant without side walls, suitable for narrow spaces. There is also the possibility of placing solar panels on the roof or using a green roof.

# PIN

Design

David Karásek, Viktor Šašinka

A modular system that allows you to assemble almost any shelter of all shapes and sizes. It was designed in two roof shape variants. The square module can be arranged side by side and expand the roofed area in four directions. The resulting assemblies can thus be square, rectangular or any irregular shape, of unlimited width and length. The round module can, in turn, be assembled into groups where the individual modules overlap. The inspiration from the kingdom of trees cannot be overlooked. A distinctive square network of beams creates an elegant ceiling, which is the same for the circular version of the roof. The Pin responds to the operational needs and space constraints of a given space and allows you to have in one design a universal gazebo, a universal gazebo, a bus shelter, or a bicycle shelter, as well as covered walkways between buildings. LED lighting, like rainwater drainage, is fully integrated into each module. The range also includes a universal system of glass windscreens. A novelty is a possibility of having a photovoltaic roof or a green roof.

# AUREO VELO

Design  
David Karásek

Derived from the popular Aureo line of bus shelters. The modified construction solution allows for offering both a low version of the shelter with anchored bicycle stands and an elevated version equipped with special two-tier stands. All this with an increased roof overhang, which sufficiently covers parked bicycles from inclement weather.

# EDGE

Design

David Karásek, Radek Hegmon

Street furniture design needs to consider the popularity of bicycles. Edge is an elegant bicycle shelter of an uncompromising dynamic shape, combining a robust supporting structure and visually light glass, supported by sophisticated stainless-steel holders. A novelty is a possibility of having a photovoltaic roof or a green roof.

# PINECONE

Design  
Jerry Koza, Adam Jirkal

A park gazebo, covered sandpit, outdoor classroom – Pinecone can be all these things. Inspired by natural laws, the self-supporting structure forms a dome of 109 scales in seven rows above each other. Thanks to the mutual rotation of the scales of the individual layers, the gazebo has an airy effect; it has a pleasant microclimate and perfect acoustics. At the same time, it provides shelter from sun, wind, and rain. A round bench is placed around the perimeter of the gazebo, and a top dome skylight, as well as ambient LED lighting, can be fitted as an optional accessory.

# SMOKERS AUREO, EDGE

Design

David Karásek, Radek Hegmon

The range of smoking shelters is a response to the ban on smoking in buildings. The modification of our Aureo and Edge design ranges has created a set of purposeful, elegant shelters that provide sufficient protection and comfort for smoking outside buildings. Aureo is standardly equipped with a wooden shelf and also with a front glass wall. The shelter can be supplemented with an ash receptacle.

## BOH905/925

### Outdoor table

steel structure, table top made of aluminum, optionally of plywood for the indoors or stainless-steel option

# CONICS

Conics seats and benches work well with the steel tables from our Pixel range of products. For creative solutions, we recommend using HPL which can be supplied with bespoke graphics for the tabletops and seats. An interesting version is also the table with an inner planter, which can be used for planting a tree to create a natural shade. Playing with the cones starts with a simple rotation.

steel structure, roof made of safety glass, rear wall made of tempered glass

### NUB210/310/410

#### Bus shelter with a flat roof

steel structure, roof made of safety glass, rear and side walls made of tempered glass

### NUB600/800

#### Two-sided bus shelter with a flat roof

steel structure, roof made of safety glass

### NUB610/810

#### Two-sided bus shelter with a flat roof

steel structure, roof made of safety glass, rear walls made of tempered glass

# PIN

Galvanized steel structure treated with powder coating. Roof made of frosted or colored safety glass. Drainage system is integrated into a column. The square network of beams creates a space for integrated LED lighting.

## PIN100/105/130/135/150/155

# PINECONE

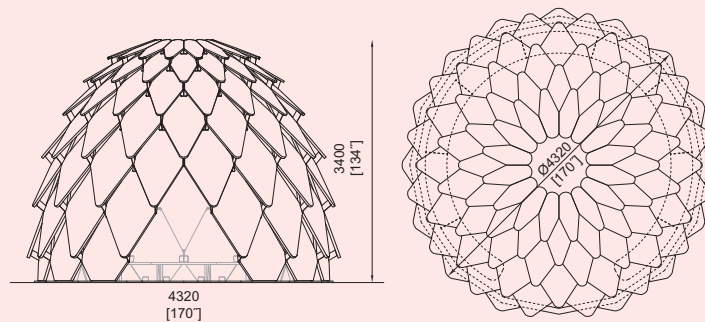

Scales made of waterproof plywood treated with durable varnish are connected to each other with galvanized steel joints and bolts with stud nuts. The lower row of scales is anchored to a base frame made of steel profiles, placed using adjustable feet on the concrete foundation. The gazebo is easy to transport and can be assembled in one day.

# SMARTCITÉ

Street furniture full of new smart possibilities.  
A truly smart city.

# RESYSTA

Extending our street furniture family  
with the use of recycled materials.

60%  
rice hulls

22%  
rock salt

18%  
mineral oil

# ANCHORING

## Types of removable anchoring

Anchoring significantly influences the overall result of a product, and we pay great attention to this detail. We don't like unsightly base plates and visible screws. For the best result, we choose embedded or hidden anchoring whenever possible. However, when surface mounting and removable options are necessary, we have options for that.

**WE CREATE WITH A LOVE FOR  
PUBLIC SPACE AND FOR OUR  
PLANET AS A WHOLE.**

# JUST AS WITH THE DESIGN OF OUR PRODUCTS, THE MATERIALS THEY ARE MADE FROM ARE HELD TO THE HIGHEST STANDARDS. WE ARE FOUNDED UPON CAREFULLY SELECTED, PROVEN MATERIALS, WHICH WE HANDLE ECONOMICALLY AND ECOLOGICALLY.

## STEEL

Steel is a fundamental material for most of our products, and all the steel we use is protected with zinc. In combination with a polyester powder coating, zinc is one of the best possible defenses against corrosion, with a far greater durability than a lacquer or zinc coating alone. Tests have shown that the spontaneous onset of corrosion on a material treated in this way is practically eradicated. As a final surface treatment, we use a polyester lacquer for a subtle matte finish, available in any color from the RAL color chart.

## STAINLESS STEEL

For those who demand even greater durability and longer lifespans, we offer products or parts of products in stainless steel. The same material is also used for all our fastenings.

As a standard, we use corrosion resistant AISI stainless steel, and for more intensive uses we use AISI 316 stainless steel. Their specific chemical composition creates a so-called passive coating on the surface of the steel, protecting it from rusting. They resist atmospheric corrosion even in an industrial setting, as well as waste water and various salts. The surface of the steel is brushed (sanded) or electrochemically buffed. This gives stainless steel products their unmistakable and highly prized appearance and long life with minimal maintenance.

## ALUMINIUM ALLOYS

For certain pieces of furniture, we use casts, plates or profiles made from aluminium alloys. The chief advantage of this is its high resistance to corrosion, without the need for any further surface treatment. The absence of any added surface coatings greatly enhances a product's resistance to machine damage. Subject to the processing technology used, the surface is blasted with an abrasive granulate, giving the material its characteristic matte finish and preventing any incidence of corrosion on the surface. Products made from aluminium profiles are protected against anodizing, preserving its characteristic color. All these pieces can be further finished with a powdered polyester coating in any color of the buyer's choice.

## WOOD

Wood is an unrivalled natural material which has been used throughout the history of mankind. It is flexible and solid, pleasant to touch, and ages in a specific way. If wood is used to produce street furniture, it must meet the highest demands. All types of wood are carefully chosen, as well as the types of surface treatments. The best possible type of wood is either tropical oiled wood or tropical natural wood. mmcit  uses wood that has been legally harvested, with FSC certification upon request. FSC-certified tropical wood is sourced only from legal logging. Other sustainable European alternatives are Robinia and thermally modified wood, available in natural or oiled finishes.

## GLASS

Glass is considered one of the most traditional materials used in architecture. Its features are still unrivalled if compared mainly to common plastics. It is hard to scratch glass, it is easily maintained, cannot be damaged with cigarette contact, and it practically does not age. Concern of fragility is unjustified – glass panels can be broken only by using a tool or extreme power. Rear and side walls, as well as roof panels, are made of tempered safety glass (limiting the risk of injury when broken).

## HIGH PRESSURE LAMINATE (HPL)

The material consists of paper (60%) and resins (40%). It consists of pressed boards made of natural fibers and decorative laminates of melamine or tempered synthetic resins. The boards are available in a wide range of colors and motifs, and the application of an individual motif is possible as well. The material is resistant to mechanical damage, frost, heat, humidity, and water vapors, and it does not corrode. It is a widely used material in architecture due to its great properties.

## RESYSTA

Resysta is an extremely durable material, resistant to sun, rain, frost, salt water, consisting of rice husks (60 %), common salt (22 %) and mineral oil (18 %). Even though it aesthetically resembles wood, it lacks the main disadvantages of wood. Resysta requires minimal care and is resistant to vermin and fungus. Thanks to its special composition, the surface stays free from cracks and splinters. In contrast to other composite materials, it looks great, and it has a smooth surface. Resysta already meets most of the future environmentally sustainable material requirements; it is recycled and fully recyclable. For the current range of Resysta family the prefabricated extruded profiles are used; these can be reinforced using steel profiles inside.

## HIGH PERFORMANCE CONCRETE (HPC)

High performance concrete (HPC) is characterized by high compressive strength, high durability and has a higher modulus of elasticity, which increases the stability of concrete. It is mainly used where there is a need to reduce weight, remove internal steel reinforcement or achieve higher concrete durability in aggressive environments. The service life is realistically predicted to be up to 200 years, and together with the reduction in volume and weight, it has a positive effect on environmental sustainability - less demand on the substrate or foundations under concrete furniture, lower costs for transport and handling of large concrete castings.

## HIGH STRENGTH CONCRETE (HSC)

For specific thin-walled concrete furniture we use high strength concrete. This is made up of a fine mixture of aggregate, cement, microsilica, water and other ingredients. Unlike traditional concretes, high strength mixes contain polymer fibers to increase flexural and compressive strength. Other advantages of these mixes include excellent flowability, minimal segregation, increased durability, smooth surfaces with no or minimal small bubbles, and partial flexibility. The high strength concrete mix we use achieves a compressive strength of 100Mpa according to laboratory tests.
